MODEL 172 SERIES SERVICE MANUAL

18-34 **NAVIGATION LIGHTS**

DESCRIPTION: The navigation lights are mounted on each wing tip and the left side of the vertical fin tip. The lights are controlled by a master type switch located on the instrument panel. A circuit breaker is attached to the panel to protect the system.

REMOVAL AND INSTALLATION: For removal and installation of the navigation lights, see Figure 18-7.

18-37 **ANTI-COLLISION STROBE LIGHTS**

DESCRIPTION: A white strobe light may be installed on each wing tip with the navigation lights. Strobe lights are vibration resistant and operate on the principle of a capacitor discharge with a neon tube, producing an extremely high intensity flash. Energy is supplied to the lights from individual power supplies mounted on each wing tip.

REMOVAL AND INSTALLATION: For removal and installation of strobe lights and power supply, see Figure 18-7.

WARNING:
This anti-collision system is a high voltage device. Do not remove or touch tube assembly while in operation. Wait at least 1 minute after turning off power before handling.

18-40 **OPERATIONAL REQUIREMENTS (TRNG OFF MODELS)**

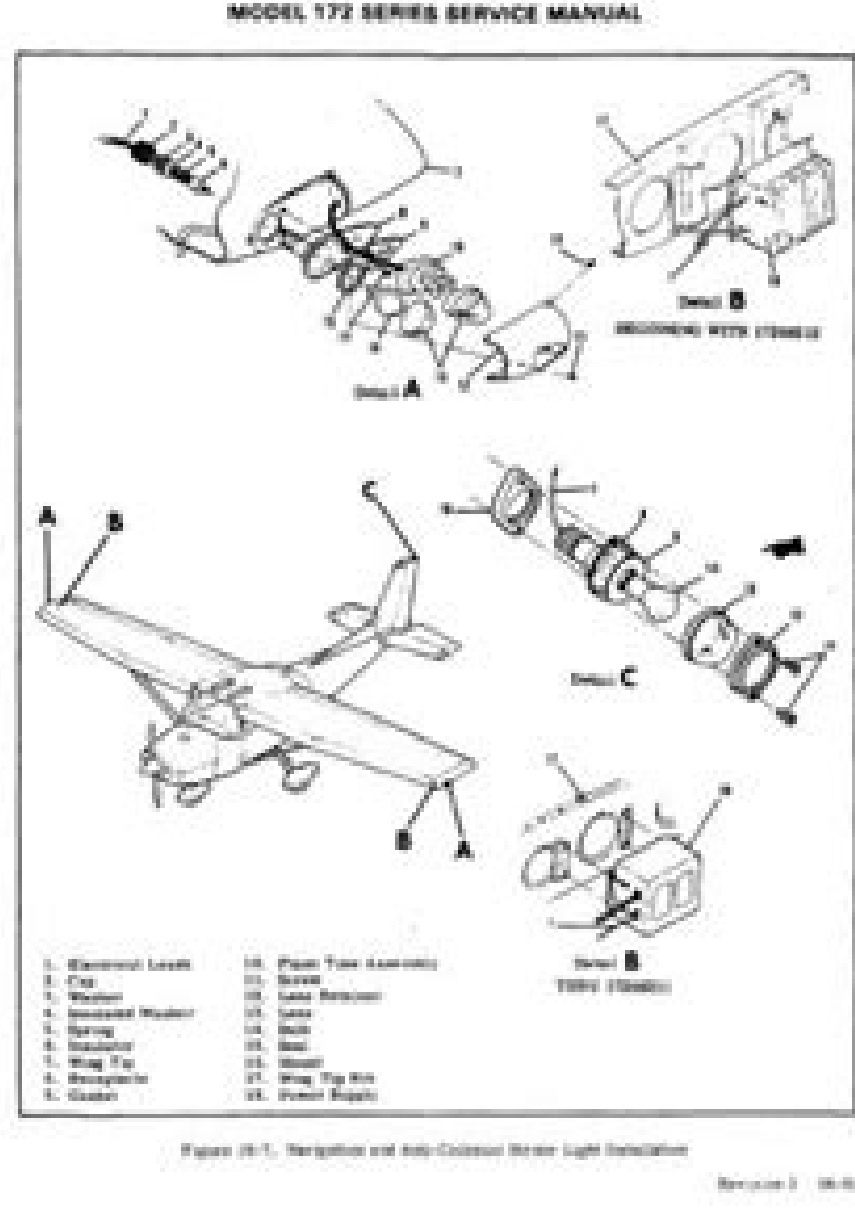

CAUTION:
The requirements for the strobe light power supply assume a maximum of one used for a period of 45 minutes. The following procedure must be used:

Connect the power supply, red wire to plus, black to ground to 8 milli DC source. Do not connect strobe tube to the system. Place power supply in a safe location. If one tube is used, maximum operation for 45 minutes. Turn off DC power source. Then connect to proper voltage. If more than one tube is used, connect to proper voltage. Turn off DC power source. Then connect to proper voltage. If one tube is used, maximum operation for 45 minutes. If more than one tube is used, maximum operation for 45 minutes. If more than one tube is used, maximum operation for 45 minutes. If more than one tube is used, maximum operation for 45 minutes.

18-41 **FLASHING BEACON**

DESCRIPTION: The flashing beacon light is attached to the vertical fin tip. The lamp is enclosed in a protective lens which is secured by a screw. The lens assembly is mounted in the aft section of the fuselage. The operating frequency of the flashing beacon is 100 cycles per second. The flashing beacon is used to indicate the location of the aircraft in the air. The flashing beacon is used to indicate the location of the aircraft in the air. The flashing beacon is used to indicate the location of the aircraft in the air.

REMOVAL AND INSTALLATION: For removal and installation of flashing beacon, see Figure 18-8.
